

Product Information

VeroPrime
Chemically Defined Medium, w/o L-Glutamine, w/o Phenol Red, sterile-filtered
Cat. No. VEP-XR-1000ML

General Information

VeroPrime is a chemically defined medium that promotes the growth of Vero cells for the production of viruses or recombinant proteins. Furthermore, VeroPrime is serum-free and animal/human origin-free.

Product Specifications

Appearance	Clear, pale red solution
Specifications	<ul style="list-style-type: none"> Chemically Defined Serum-Free Animal Origin-Free Human Origin-Free
Storage and shelf life	Store at +2°C to +8°C protected from light. Once opened, store at +4° C and use within 6-8 weeks.
Shipping Conditions	Ambient
Concentration	1 X
Buffer system	NaHCO ₃ (2.2 g/L) for 5% CO ₂ Atmosphere
Formulated with	<ul style="list-style-type: none"> Epidermal Growth Factor (EGF), recombinant Insulin, recombinant Sodium Pyruvate Hypoxanthine Thymidine

For a greater stability and extended shelf life the medium is formulated without L-Glutamine. Antibiotics are not recommended; however, 10 ml/L of Antibiotic-Antimycotic (100X) containing penicillin, streptomycin, and amphotericin B may be used if required.

Instructions for Use

Adaptation:

For cells grown in serum supplemented medium or other serum-free medium little or no adaptation is needed and may be directly transferred to VeroPrime. It is advisable to keep a backup culture in the original media until cells have adapted. If suboptimal growth is observed after direct adaptation for 3–5 passages use the sequential adaptation method.

Sequential adaptation:

- Subculture cells into a 25:75 ratio of supplemented VeroPrime to the original media. During the adaptation procedure seed at twice the normal seeding density ($2-8 \times 10^4$ viable cells/cm²).
- Subculture cells when confluency reaches 70–90%. Subculture the cells in fresh pre-warmed 25:75 ratio of supplemented VeroPrime to the original media. Once consistent cell growth with high viability has been achieved, passage cells into a 50:50 ratio of supplemented VeroPrime to original medium.
- Repeat step 2 of this procedure, stepwise increasing the ratio of VeroPrime to original medium (75:25 followed by 90:10) until the cells are subcultured into 100% VeroPrime. Multiple passages at each step may be needed.
- Continue to monitor and passage cells until consistent growth with high viability is achieved. After several passages in 100% VeroPrime, the culture is considered to be adapted.
