

Product Information

NCS21 Supplement (50x), w/o Vitamin A, Serum-free
 Cat. No. C21-XV-H (10 ml)

General Information

NCS21 Supplement is a serum-free supplement for neuronal cell cultures. It is an optimized and modified formulation of B-27™ Supplement (B-27™ is a registered trademark of Southern Illinois University. No association, sponsorship or affiliation is implied herein.). This variant of NCS21 Supplement is formulated without vitamin A, and therefore, may be used for stem cell derived neural progenitor cell expansion or assays, where vitamin A is not desired.

NCS21 Supplement is suitable for the long-term growth and viability of hippocampal and other neurons of the central nervous (CNS) and peripheral nervous system (PNS). Its defined formulation contains vitamins, hormones and other growth factors including insulin, human transferrin, catalase, antioxidants and fatty acids.

Applications:

- Differentiation of ES cells into neuron lineage (neuron and astrocytes)
- Differentiation of neuronal stem cells into astrocytes and neurons
- Optimal growth and long-term survival of rat hippocampal neurons (fetal and adult)
- Survival of neurons from embryonic rat striatum, substantia nigra, septum and cortex, and neonatal rat cerebellum (fetal and adult)

Features:

- Serum-free composition
- Long-term growth and viability
- Optimized formulation

Product Specifications

Appearance	Clear frozen liquid
Storage and shelf life	Store at ≤-15°C. Avoid repeated freeze-thaw cycles. Preparation of aliquots recommended. Once opened, store at 4° C and use within 2-4 weeks.
Shipping conditions	Frozen (Dry ice)
Thawing	+37°C water bath or overnight at +2°C to +8°C. Swirl gently to homogenize.
Working Concentrations	Recommended final concentration: 1 x

Product Information

NCS21 Supplement (50x), w/o Vitamin A, Serum-free
Cat. No. C21-XV-H (10 ml)

Formulation

Components	
L-Carnitine	T3 (Triiodo-L-Thyronine)
Corticosterone	DL- α -Tocopherol
Ethanolamine	DL- α -Tocopherol Acetate
D(+)-Galactose	
L-Glutathion reduced	Proteins:
Linoleic Acid	Bovine Serum Albumin
Linolenic Acid	Catalase
Lipoic Acid	Human Recombinant Insulin
Progesterone	Superoxide Dismutase
Putrescine	Human Transferrin (holo)
Sodium Selenite	

Instructions for Use

NCS21 Supplement is a 50-fold concentrate. Dilute NCS21 Supplement into the base medium 1 : 50. The final concentration of NCS21 Supplement corresponds to 1x. For preparation of 100 ml medium add 2 ml NCS21 Supplement into 98 ml of the appropriate base medium.

Cell culture vessels must be coated with Poly-D-Lysine (0.05 mg/ml). If using in combination with N2 Supplement or N2 Supplement Modified add Fibronectin at a final concentration of 5 to 10 μ g/ml directly to the medium.

For Cultivation of Fetal Neurons : Add NCS21 Supplement (50x) to base medium (add 0.5 mM L-glutamine) to a final concentration of 1x. For initial plating of embryonic primary hippocampal neurons 25 μ M (3.7 μ g/ml) glutamate must be added for the first 4 days. After initial plating no glutamate is necessary. Change media every 3 to 4 days.

For Cultivation of Adult and Postnatal Neurons : Add NCS21 Supplement and G5 Supplement to basal media (add 0.5 mM L-glutamine) to obtain a final concentration of 1x.

For Serum-free Growth of Neuroblastomas : Add NCS21 Supplement to basal media (add 0.5 mM L-glutamine and 25 μ g (3.7 μ g/ml) glutamate) to a final concentration of 1x.
